The DCGI granted emergency approval to Covaxin, the first indigenous DNA vaccine. ZyCoV-D is the second indigenously developed vaccine for use in humans.

One is constrained to say this is reckless adventurism at best, and government mismanaged the vaccine roll-out. In a broadcast from the viral infection, the body to produce antibodies against itself, and hence grants protection.

The severe disease in the vaccinated is reminiscent of what happened with Dengvaxia, which was made by vaccine makers in the Philippines. Initially, Dengvaxia, which was made by vaccine makers in the Philippines, was marketed as a dengue vaccine a few years ago. Initially, Dengvaxia, which was made by vaccine makers in the Philippines, was marketed as a dengue vaccine a few years ago.
